CONCRETE POUR AT GOSHEN BRIDGE REHABILITATION
NH ROUTE 10 OVER SOUTH BRANCH SUGAR RIVER

The New Hampshire Department of Transportation announces concrete work in connection with the rehabilitation of the NH Route 10 bridge over the South Branch Sugar River in Goshen will result in some traffic delays on Friday, June 4, 2004.

Motorists can expect up to ten-minute delays during one or two different time periods on June 4 to allow for the pouring of concrete on the bridge.

Temporary signals are being used to control alternating one-way traffic crossing the bridge.

Frank W. Whitcomb Construction Corp. of Walpole, New Hampshire is the prime contractor for the \$524,000 project, which has a scheduled completion date of September 2004.
